Water Solutions for a Healthier Environment

GalvinClear® Lead Safe™ product range has been redesigned and re-engineered to provide safer water delivery by utilising specialist materials such as stainless steel or plastic materials that are free of lead, and DZR brass that is low in lead. This change in materials and the development of new manufacturing techniques provide enhanced water outcomes for the end-user, and the continued reliability you expect from a Galvin Engineering tapware product. Every day we focus on the design and supply of specialised taps, water management systems, and fixtures for better health and safer communities.
